

Android Attendance App

Sign In Page : If a user has an account in the attendance app, then the user can sign in through the sign in page. For now, only SUST emails will be accepted by the sign in page. If the user does not have any account, they can click the sign up button at the bottom and then make a user account. If a user is a student and clicks the sign in button, the app takes the user to the student dashboard, and if the user is a teacher, then it takes the user to the teacher dashboard.

Sign up page : If a user wants to make an account in the attendance app, they can use the sign up page. They simply enter the SUST email address and a password, then click the sign up button and make a user account easily. If the user is a student, then they must enter the SUST student email address, and if the user is a teacher, then they must enter the SUST teacher's email. After clicking the sign up button, they can easily go to their dashboard by using the sign in page.

Student Dashboard : The student dashboard consists of three segments:

first segment Displays the student's name (retrieved via their email address) and their Registration ID, which is unique to every student.

In the middle segment it has a scanner option that allows students to scan a QR code provided by the course teacher.

At last it's show the Hardware ID of the device and Shows the Hardware lock and scanner status.

Scanner option : If the student clicks the scanner option, it will go to verify the QR code and mark the student present. Each QR code is uniquely generated for a specific time frame. Students use this scanner to record their attendance. If a student attempts to scan another QR code after already submitting their attendance, a pop-up message will appear stating, "Already marked present". Therefore, a student can only submit attendance once per session. Once attendance is submitted, the teacher can view the student's Name, Registration ID, and Hardware ID.

The Hardware ID is unique to every device. If a student successfully records their attendance for a course and then logs into another account on the same device to submit a proxy attendance for someone else, the teacher will be able to spot the duplicate Hardware ID and flag both student accounts.

Confirmation : If the student scans the QR code successfully, it will show a page and give a message to the student that they have successfully attended the course.

Student Name and
Registration ID.
